

Company Product Safety Policy

Technoset & Technoturn are manufacturers of ultra-precision machined components and assemblies to Industries including Aerospace and these include the manufacture of critical products that people's lives could depend upon.

The principles that govern our approach to Product Safety are:

- **Leadership, commitment, and accountability.**

Our leaders champion product safety and prioritize it so that safety-related tasks get the right attention, time, and resources. We make accountability for product safety clear and ensure people understand what they are accountable for.

- **Level of product safety.**

We manufacture products to achieve a high level of safety consistent with their application, always ensuring that we meet or better the relevant company, legal, regulatory and industry requirements. We assess what could go wrong and put controls in place to meet the required safety levels and reduce the safety risks so far as is reasonably practicable.

- **Maintaining and improving product safety.**

We are committed to the continuous improvement of product safety and actively engage in setting industry Standards and Good Practice. We measure our performance and rigorously investigate and resolve safety related issues, systematically embedding the learning from these back into our practices and processes. Everyone is encouraged to report any product safety concerns.

- **Conforming product.**

Robust quality is an essential building block of product safety and by following our processes we ensure that our products and those of our suppliers conform to their specification.

- **Safety awareness and competence.**

Everyone who works in Technoset shares responsibility for product safety and we must be mindful of the safety implications of our actions. Training is provided so that our people understand the Product Safety Policy and Processes and can fulfil their collective and personal responsibility.
